

Challenge on Multi-Modal Image Fusion

Existing Method (1) : ✓ Automatic, ✗ Low Visibility

Existing method (2) : ✓ High Visibility, ✗ Manual Operation by Specialist

Proposed method : ✓ High visibility, ✓ Automatic

Automatic analysis and fusion by AI

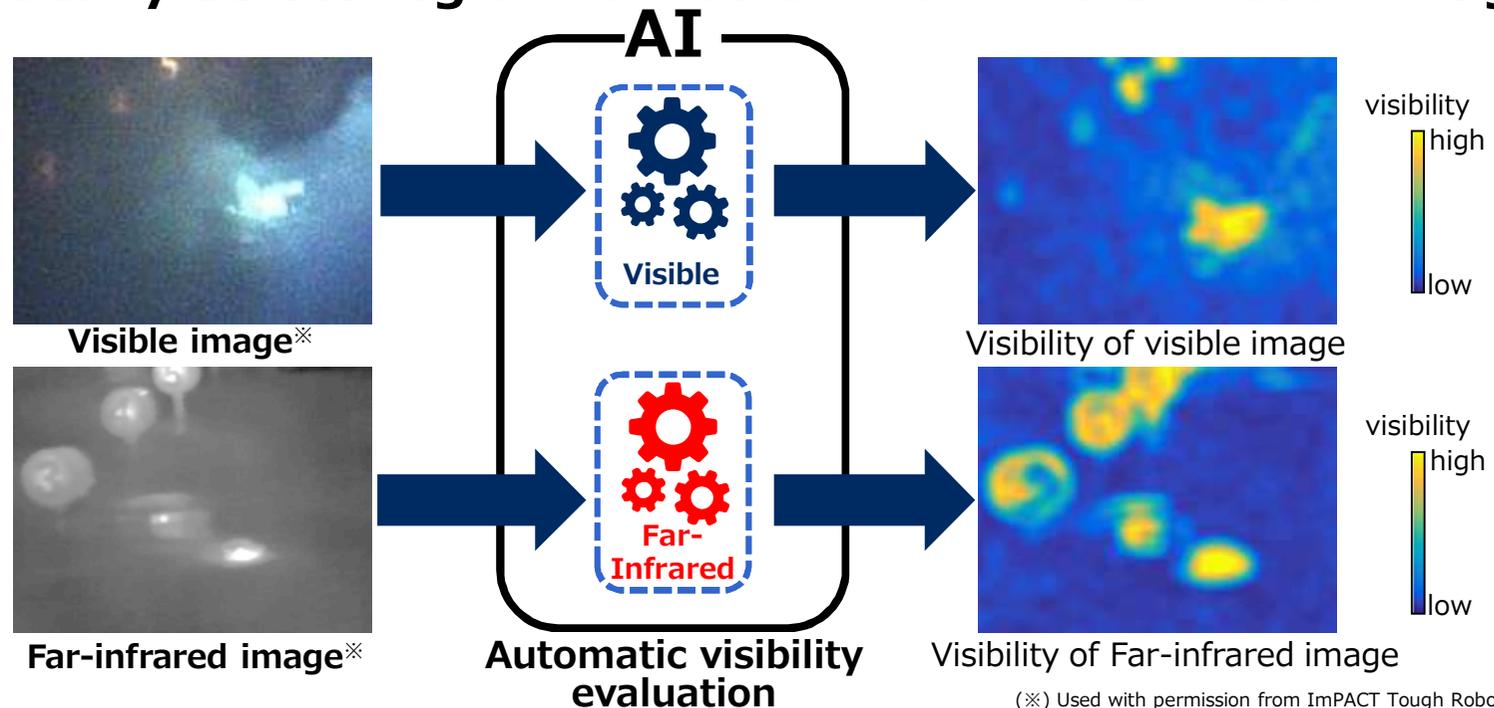

AI automatically analyzes and fuses multi-modal images
without manual operation by specialist.

Proposed Multi-Modal Image Fusion (1)

Evaluate visibility pixel-by-pixel based on camera (e.g. thermos camera) and environments (e.g. light condition, occlusion).

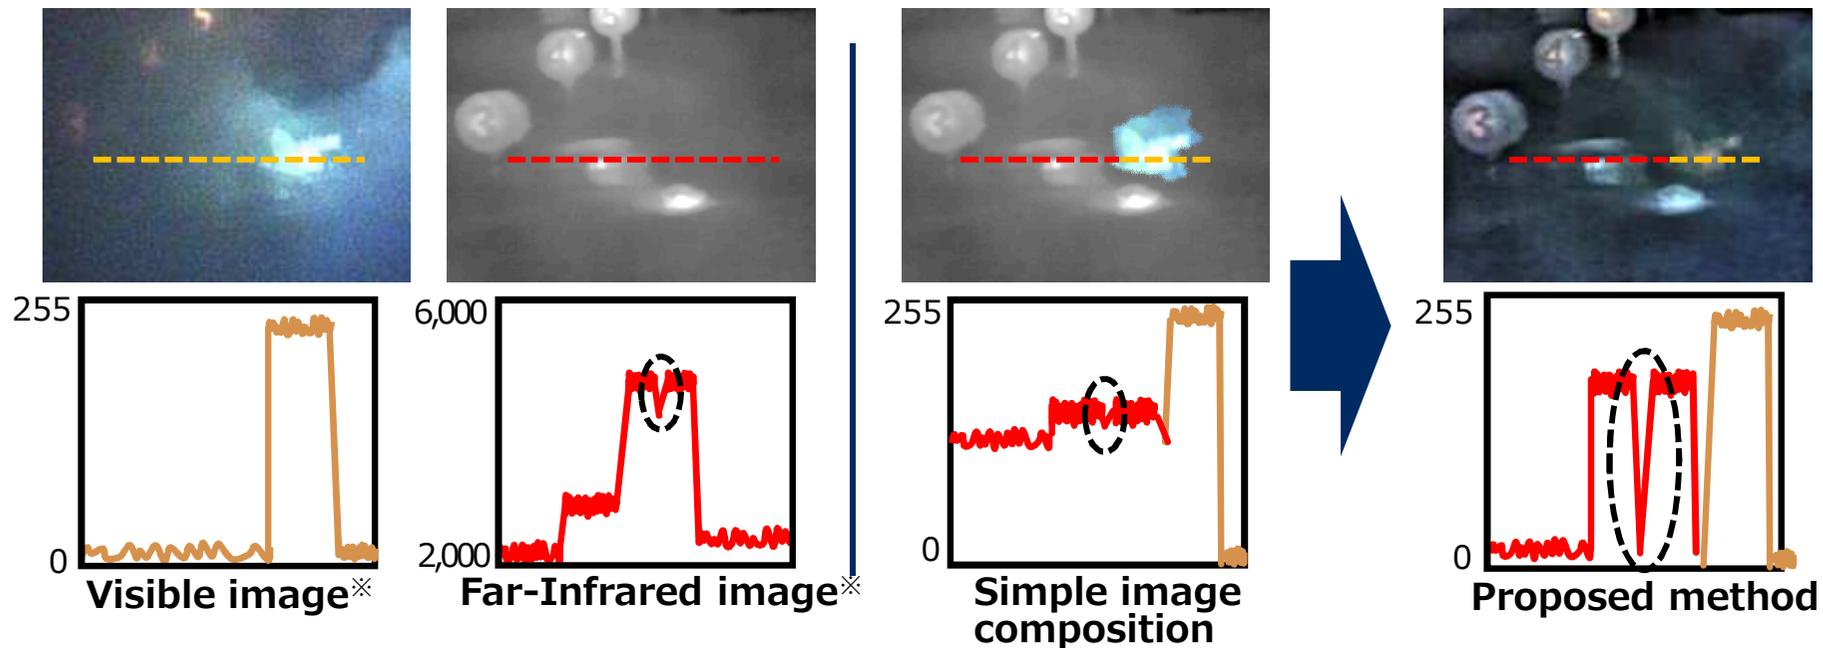

Automatically select region for fusion from multi-modal images.

Proposed Multi-Modal Image Fusion (2)

- Analyze important feature for anomaly detection in non-visible image.
- Generate output image by enhancing the important feature without artifacts such as crushed black and clipped highlight.
